

Air – Powered C - 200AIR

Air-Powered cleaning in hazardous areas. Onshore and offshore

In line with growing safety demands, electrically and engine driven equipment become insufficient and risky because sparks can easily occur from broken cables, glowing mufflers etc.

The air driven high pressure cleaner protects against sparks as it only requires air and water. It offers refineries, chemical plants, oil rigs, oil tankers and aircraft industries the best possible safety from a mobile high pressure cleaner.

The unit incorporates water separator with auto drain value, air regulator with pressure gauge and air lubricator. It also features a chemical injector.
