

KAROMAT COLD WATER HIGH PRESSURE CLEANER

KD 1000 - 200

The Karomat KD 1000-200 cold water high pressure cleaner is remarkable in its kind due a simple but strong, ergonomic structure.

Because of the two robust wheels and the strong push bar, the cleaner is easy to manoeuvre, and the 3-point ground contact ensures a steady positioning on every surface.

The overflow valve prevents the machine from starting/stopping when the handle is operated. This prevents coinstantaneous power peaks on the net.

Pump and parts are efficiently protected by the stainless steel cover, but still the gauge is easy to read on top, and the pump pressure is very accessible to control by the regulator on top.

The included 8 ltr. detergent tank feeds the suction type chemical dozer through a tube, so both build-on tank or external tanks can be used for mixing chemicals, soaps or detergents. The powerful 5.5 kW. motor is protected by an electric thermal protector.

Standard supplied with 10 mtr HP hose, lance, gun, nozzle, chemical dozer and 5 mtr cable.

TECHNICAL DATA

KD 1000-200	
Power supply kW (HP)	5 (7.5.0)
Voltage (V) triple phase	400V-50 Hz, 440V-60 Hz or 3x220V 50/60 Hz
Pump	3 cilinder piston pump with ceramic pistons
Capacity	Max 200 Bar
Water flow	Max 1000 liter/hr
Max. inlet water temp	60 degrees Celcius
Dimensions LxWxH (cm)	75 x 51 x 49 cm
Weight (Kg)	50 Kg
